

Derivation Metro Atlas: Overview

Seven-page proof atlas: one cross-sector map plus one page for each companion paper.

Foundations and Methodology

Record alphabet, cube crystallisation, QEC ledger discipline, and claim-status gates.

Reader message. The foundation is not a metaphor for computation. It is a finite record geometry plus an error-correcting service ledger. The methodology page should make clear conditional, imported, retired, or open.

Status

- derived / script-backed
- conditional closure
- open blocker
- imported theorem
- grey arrows: proof dependency

Matter, Gauge Structure, and Spectroscopy

How the code spine supports SM registers, anomalies, spectroscopy anchors, and gauge-cell checks.

Reader message. This page separates exact finite-code identities from phenomenological gauge-cell numerical certification.

- Status**
- derived / script-backed
 - conditional closure
 - open blocker
 - imported theorem
 - grey arrows: proof dependency

Cosmology, Dark Energy, and Inflation

Queue cosmological constant route, proton-primary outputs, and HBC scalar-printer premises.

Reader message. Cosmology is no longer a loose collection of numerology. It is a small set of premises, with the live residuals explicitly named.

Status

derived / script-backed

conditional closure

open blocker

imported theorem

grey arrows: proof dependency

Embedded crystallisation, kinetic relic defects, shadow energy, and MOND/R4 residuals.

Embedded crystallisation, kinetic relic defects, shadow energy, and MOND/R4 residuals.

grey arrows: proof dependency

route is now a kinetic relic mechanism, not an equilibrium
ains a separate conditional line-current theorem.

Gravity, Horizons, and Black Holes

Metric strain, proton-primary gravity, horizon ledger identities, and black-hole shell dynamics.

Status

- derived / script-backed
- conditional closure
- open blocker
- imported theorem

grey arrows: proof dependency

paper should distinguish the strong proton-primary route from
ons, then use the horizon ledger for black-hole microphysics.

Relativity, Photon, and Causal-Set QED

Propagation clock, Gauss-projected photon identity, trans-QCD service packets, and loop Maxwell action.

Status

derived / script-backed

conditional closure

open blocker

imported theorem

grey arrows: proof dependency

split into a clean IR propagation theorem and a harder representation of energy quanta and manifestly gauge-invariant causal-set dynamics.
