

Derivation Tree Atlas: Overview

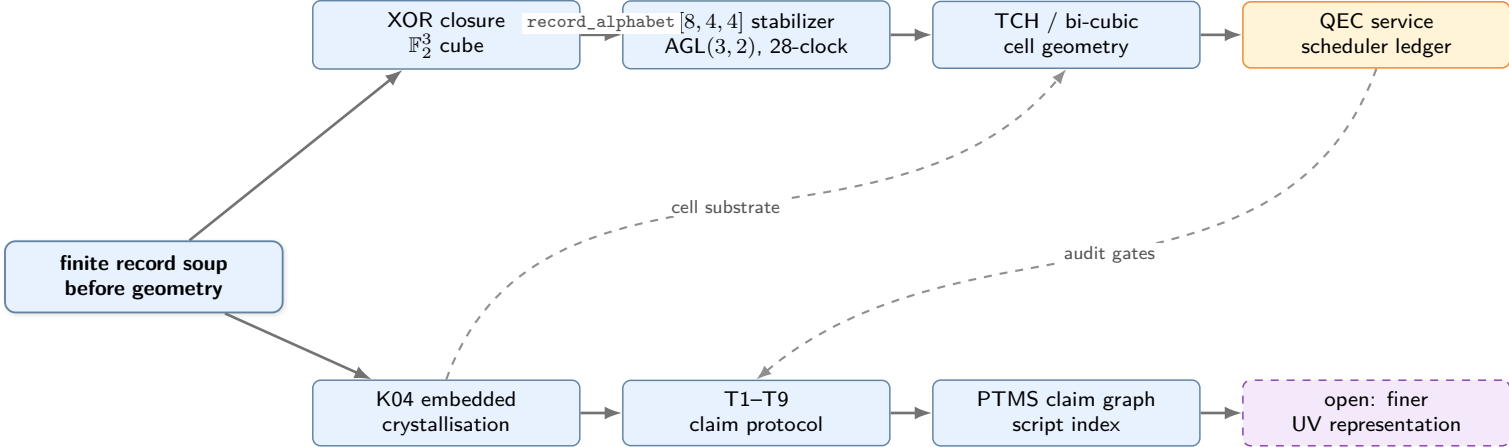

A readable tree-first reduction of the canon graph. Cross-links are shown only when they carry real load.

Status: derived/script-backed conditional open retired dashed arrows = non-tree dependencies

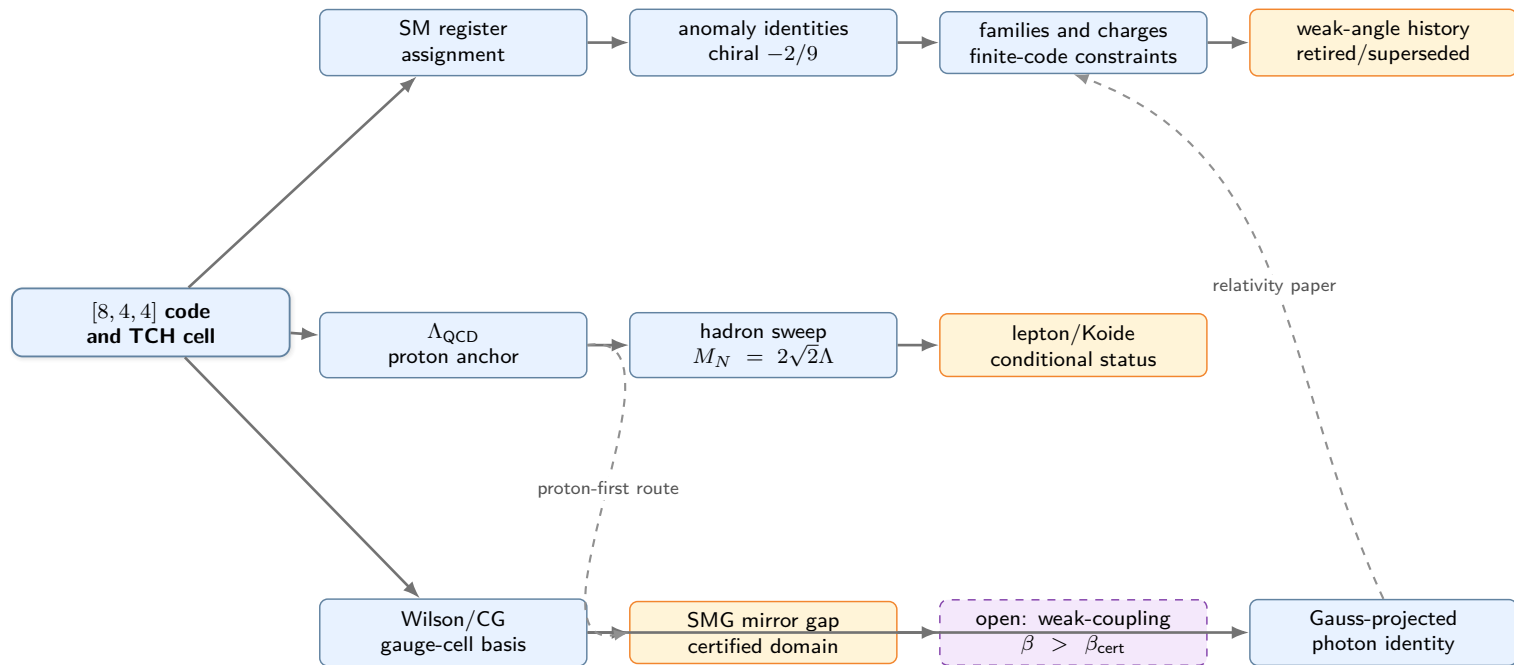

Foundations and Methodology

The finite record object, its crystallised cell geometry, and the audit discipline.

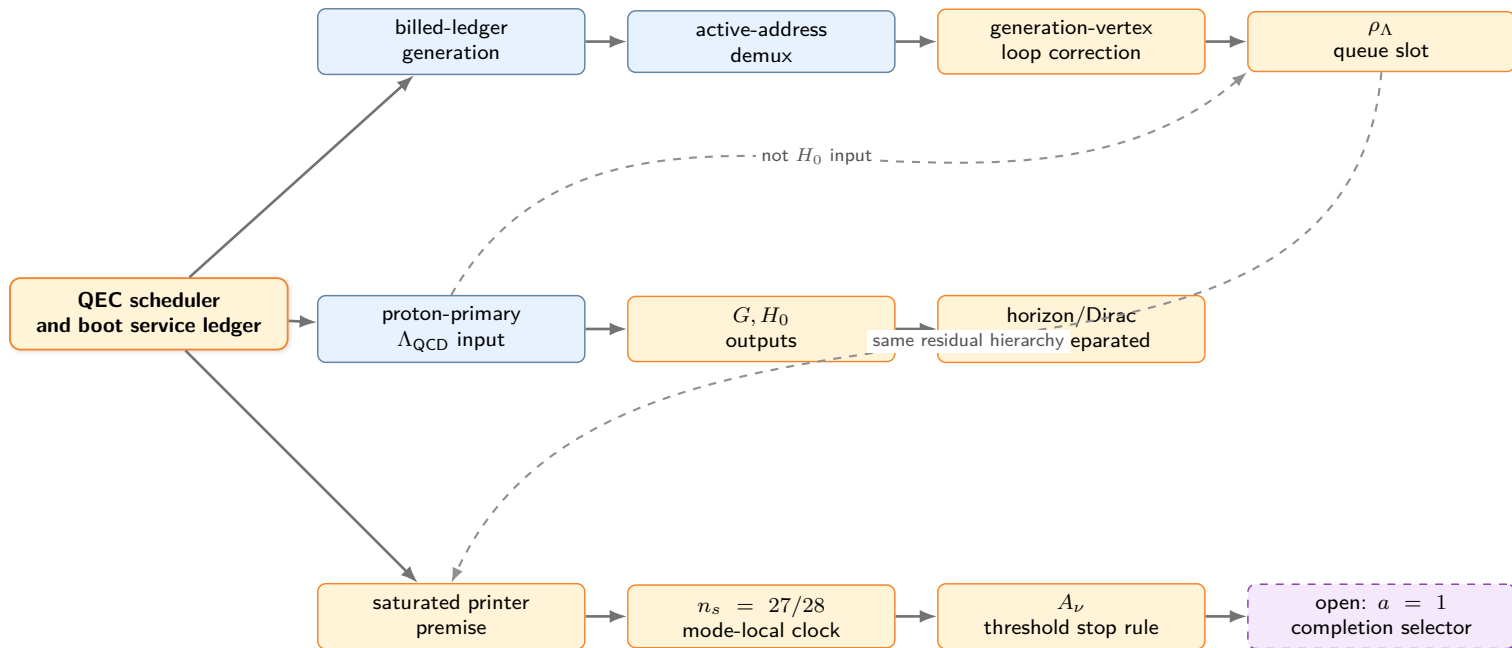

Matter, Gauge Structure, and Spectroscopy

Exact finite-code identities separated from spectroscopy and gauge-cell certification.

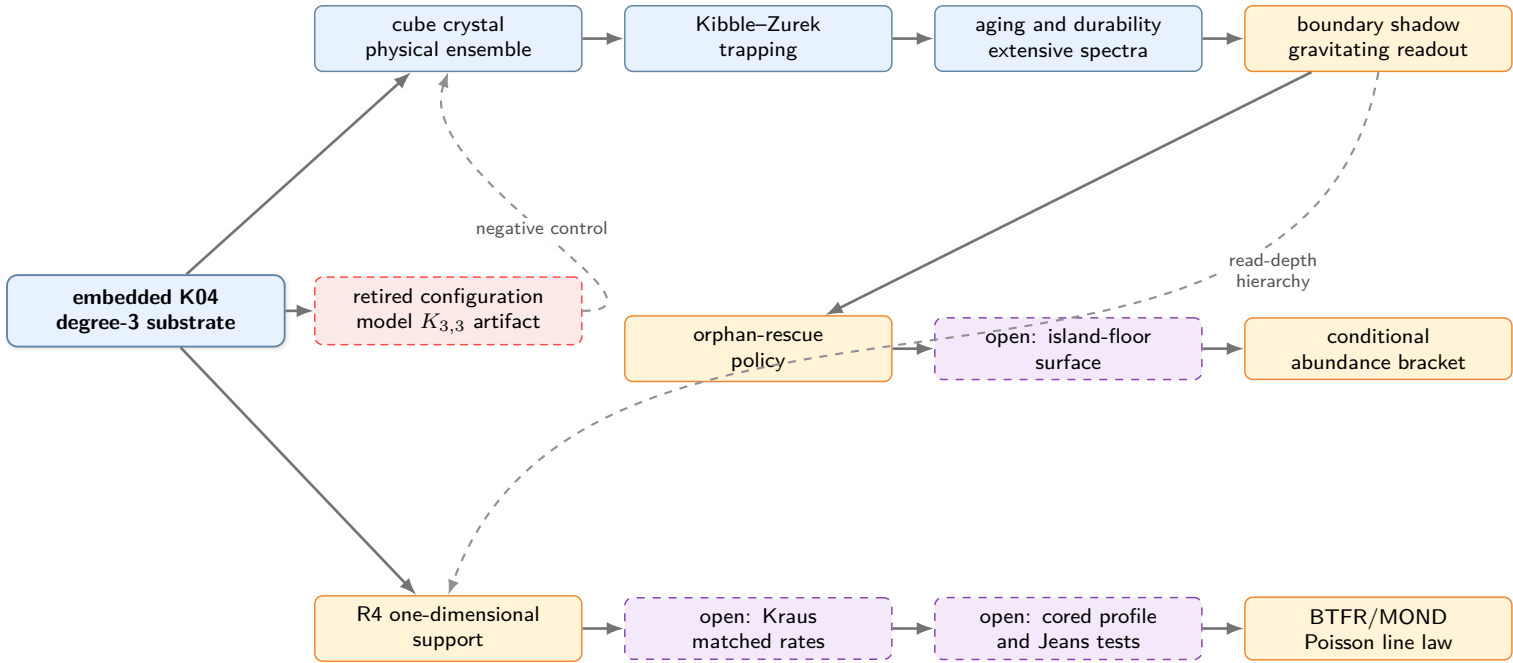

Cosmology, Dark Energy, and Inflation

The scheduler/queue chain, proton-primary output boundary, and HBC printer residuals.

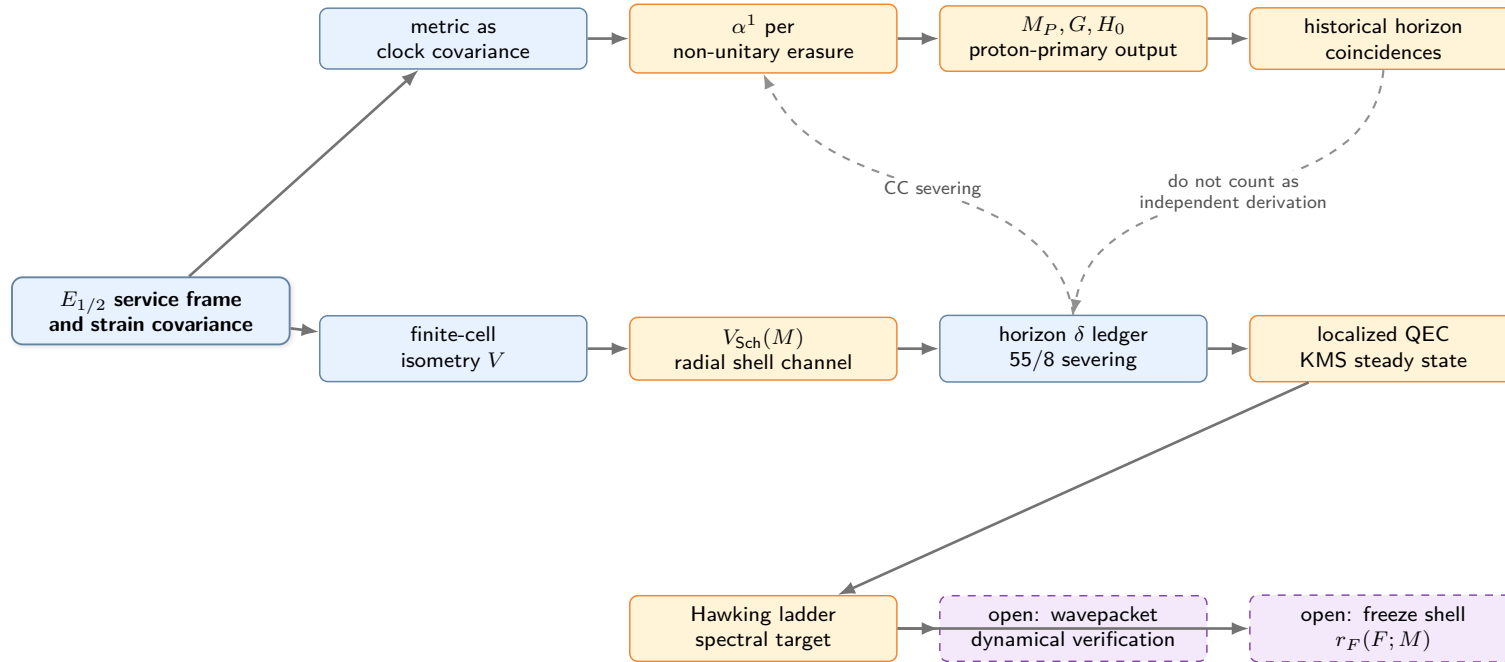

Dark Matter, MOND, and K04 Debris

Kinetic relic defects and line-current MOND are adjacent but not the same claim.

Gravity, Horizons, and Black Holes

Metric strain and horizon microphysics, with historical Dirac routes kept honest.

Relativity, Photon, and Causal-Set QED

The IR propagation limit is clean; high-energy representation and manifest gauge dynamics are the frontier.
